

Variable Naming Convention

In python Variables -

- Case sensitive
- Begins with Lowercase Letters
- Use '_' between words instead of space .

```
[1]: my_name="nabiha"  
print(my_name)
```

nabiha

```
[5]: myName='peter'  
print(myname)
```

```
-----  
NameError                                Traceback (most recent call last)  
Cell In[5], line 2  
      1 myName='peter'  
----> 2 print(myname)  
  
NameError: name 'myname' is not defined
```

```
[3]: 12name = kuhu  
print(12name)
```

```
Cell In[13], line 1  
    12name = kuhu  
      ^  
SyntaxError: invalid decimal literal
```

```
[5]: $name=kiti  
print($name)
```

```
Cell In[15], line 1  
    $name=kiti  
      ^  
SyntaxError: invalid syntax
```

```
]:
```

Keywords in Python

- There are some **reserved** word that cannot be used as variable name. Like:

False	class	return	is	finally
None	if	for	lambda	continue
True	def	from	while	nonlocal
and	del	global	not	with
as	elif	try	or	yield
assert	else	import	pass	
break	except	in	raise
